★Adobe Flex 4 and Adobe AIR 4 beta and Community Edition App for Windows is a free- software platform for building desktop and mobile applications for HTML, CSS, and XML with a unique approach to rapid development and a native integration model that can be accessed through a web browser and deployed as an application from a CD-ROM or the internet. ★adobe flex 4 and AIR 4 beta and Community Edition App for Windows is a free- software platform for building desktop and mobile applications for HTML, CSS, and XML with a unique approach to rapid development and a native integration model that can be accessed through a web browser and deployed as an application from a CD-ROM or the internet. The goal of the proposed research is to understand the mechanism of N-ras gene activation. N-ras gene activation has been correlated with the development of breast and lung cancers. We have demonstrated that the ras gene is activated by EJras, an oncogene derived from the E1A transforming gene of the adenovirus type 12. EJras can be activated by the SV40 large T antigen and the human papilloma virus E5 proteins. Further, we have shown that the ras-specific inhibitor, N-rasGAP, can be activated by SV40 T antigen. We have also cloned the cellular homolog of N-rasGAP, K-rasGAP, and demonstrated that K-rasGAP is down-regulated in normal human cells and some types of tumors. In addition, we have cloned the mouse homolog of N-rasGAP. The studies outlined in the following sections will test the following hypotheses: 1) ras gene activation is a consequence of the activation of its specific transcriptional activator and the expression of K-rasGAP in the cytoplasm (de-repression of K-rasGAP) is necessary for the activation of K-ras by T antigen, and 2) The RAS-A, a newly discovered protein with homology to N-rasGAP, functions to repress ras gene activation in a manner analogous to K-rasGAP and N-rasGAP. A molecular understanding of the activation of the ras gene is essential for understanding the mechanism of ras gene-dependent malignancy. Because the ras gene is activated in a large number of human cancers, there is a high likelihood that the results of the proposed studies will shed light on the pathogenesis of these cancers and help to identify 82157476af
